Eastside Foursquare Church, located in Bothell, Washington, is home for approximately 5000 members. Founded in 1978, Eastside Foursquare experienced dynamic growth and gained national prominence and attention by attempting to creatively and sensitively reach out to the Baby Boomer generation...Over the years the church has remained a ground-breaker and regional leader through consistently providing culturally relevant worship, teaching, and outreach. In keeping with their commitment to their community to stay current, the leaders at Eastside Foursquare Church decided to make some changes by upgrading the acoustical treatments and audio system in their 1200-seat auditorium. Onpoint Designs, by using a combination of acoustical modeling software and our consultants' own personal experiences as audio sound technicians, created a flexible system that would continue to support the church's many weekend services and special event performance needs while providing the opportunity for future additions or further upgrades.
