

## Resumes

### Todd Gathany

SENIOR CONSULTANT  
ONPOINT DESIGNS, LLC  
YEARS EXPERIENCE: WITH ONPOINT DESIGNS 3,  
WITH OTHER COMPANIES 15

### Education

Bachelor of Arts in Broadcast Production, 1991  
*Cedarville University, Cedarville, OH*

### Experience

10 years—Director of Production Services  
Four years—Director of Media Production  
Three years—Senior Design Consultant

### Qualifications

Specializing in the integration needs between stage layout design and general production elements, Todd brings his 15 + years of audio, video and lighting experience in live performance, coupled with the valuable insight gained from being on both sides of a project to our Onpoint Design team. He has a strong understanding of what will really work in a design, rather than what just looks good on paper. He enjoys the process of designing systems that accomplish the client's goals.

### Select Experience

#### **Chiawana High School, Pasco, Washington**

The growing population of this Tri-City area in Central Washington presented the community with a need for the addition of a new High School. Working with Loofburrow Architects from the ground up, Todd created the acoustical, audio, video, and lighting design for the school's brand new, state-of-the-art 700-seat Performing Arts Center.

#### **Sage Valley Intermediate School, Nampa, Idaho**

Todd Gathany, working in cooperation with Loofburrow Architects, designed a new 400-seat auditorium in response to the needs of a growing school district for more space. Todd created the acoustical, audio, video, and lighting design for this public school new construction project. In addition to the performing arts auditorium, Todd also designed acoustical treatments and audio / video systems for the choir and band rehearsal rooms.

#### **Cedarville University, Cedarville, Ohio**

Assisted in the reconfiguration of the audio design for the University's 3500 seat Auditorium with options for future planning

#### **The Heights Church, Prescott, Arizona**

Designed the Acoustical, Audio, Lighting, and Video systems for this new construction 1000-seat Auditorium project. Part of this retro-fit design was consideration of the client's desire for the option to integrate the outdoor and indoor spaces. Garage-style roll-up doors and multi-use capabilities were among the challenges presented to the design team. By working closely with the client, Todd was able to translate their ministry desires and goals for use into creative and functional designs with an eye toward future expansion.

#### **Abundant Living Family Church, Rancho Cucamonga, California**

Entering the project after it was well underway Todd worked with this client to help maximize their Video & Lighting Systems budget dollars in part by designing Video and Lighting Systems that met their immediate need and provided a viable path for expansion and growth.
